The expedition's activities were focused on the archaeological survey of the Hesban region. The survey was conducted in two consecutive seasons at Andrews University, over the 1999-2000 years.

The Hesban region was selected for its potential archaeological significance. The survey aimed to identify and document cultural layers present in the area.

and 138.
Roman Period

196, 174, 175, 178, 181, 191, 192, 194, 197, 199, 202, 204, 206, 208, 210, 212, 214

Other sites bearing Byzantine pottery were 187, 191, 193, 195, 197, 199, 202, 204, 210, 212, 214.

Material

174, 175, 178, 181, 191, 192, 194, 197, 199, 202, 204, 206, 208, 210, 212, 214

On all hill overlooking Niny, is the small site 175 (2011).
Bronze Period

The period of Bronze was characterized by the presence of bronze objects, particularly in the form of bronze vessels and weapons. The Bronze Age marks a significant transition from the Neolithic to the Iron Age, with a marked increase in the use of metal tools and weapons. The Bronze Age was characterized by the use of bronze, an alloy of copper and tin, which provided a more malleable and durable material for making tools and weapons.

Early Bronze Age

The period of Early Bronze Age is marked by the use of bronze tools and weapons. It is characterized by the presence of early bronze vessels and weapons, such as bronze swords and axes. The Early Bronze Age is also marked by the spread of bronze artifacts across the Near East, with the invention of the wheel and the development of wheel-thrown pottery.

Middle Bronze Age

The Middle Bronze Age is marked by the continued use of bronze, with a greater variety of artifacts becoming available. The Middle Bronze Age is characterized by the development of a more sophisticated bronze industry, with the production of more complex and elaborate artifacts such as bronze figurines and weapons.

Late Bronze Age

The Late Bronze Age is marked by a significant increase in the use of bronze, with a greater variety of artifacts becoming available. The Late Bronze Age is characterized by the development of a more sophisticated bronze industry, with the production of more complex and elaborate artifacts such as bronze figurines and weapons.

In Summary

The period of Bronze was characterized by the presence of bronze objects, particularly in the form of bronze vessels and weapons. The Bronze Age marks a significant transition from the Neolithic to the Iron Age, with a marked increase in the use of metal tools and weapons. The Bronze Age was characterized by the use of bronze, an alloy of copper and tin, which provided a more malleable and durable material for making tools and weapons.
It can be seen that occupation was very light in these periods:
